

COLLABORATIVE ONLINE INTERNATIONAL LEARNING METHODOLOGY

Organized by Obreal and CSUCA

Course Description

Collaborative Online International Learning (COIL) is a methodology that connects professors and students from different countries to work collaboratively in the classroom, through the design of joint learning experiences between higher education institutions without the need for physical mobility. Originally developed by the SUNY COIL Center (State University of New York), it has been adopted by universities around the world as a key tool for internationalization at home.

In the CSUCA–Obreal COIL Course, you will learn how to design this type of collaborative experience and transform your teaching practice through international cooperation. The program offers an initial theoretical introduction to the fundamentals and principles of the COIL model, after which participants will form interdisciplinary groups to collaboratively design and implement an educational proposal based on this methodology.

Duration	Start Date	Price
3 months	September 1, 2025	Free
Participants	Format	Language
Faculty members from public universities that are part of CSUCA	Online	Spanish

Learning Outcomes

1. **Identify the theoretical and conceptual foundations** that underpin the COIL methodology as a strategy for curriculum internationalization in higher education.
2. **Recognize the profile and role of the different actors involved** in the design and development of a COIL experience within the university context.
3. **Distinguish the requirements, teaching strategies, and digital resources** that facilitate the implementation of this methodology, taking into account the particular characteristics of each institutional environment.
4. **Develop a joint COIL experience proposal** with an interdisciplinary and intercultural approach, adapted to your academic context.
